

Human-Centered Experience Analysis

	HUMAN		JOURNEY			INTERACTION		SYSTEM	DESIGN	
	01	02	03	04	05	06	07	08	09	10
	SET THE STAGE	DEFINE THE GOAL	FRAME EXPERIENCE	TELL THE STORY	HUMAN STATE	MAP TOUCHPOINTS	MODEL INTERACTIONS	ACTIONS & NEEDS	MAP THE SYSTEM	DESIGN REQUIREMENT
	Who?	Why?	Where / when?	What happens?	What is felt?	Where contact?	How exactly?	What is needed?	What enables it?	What changes?
QUESTION	Who is the person?	What are they trying to achieve?	Where does the journey start/end?	What happens from start to finish?	What happens inside the person's mind?	Who / what do they encounter?	How does each critical interaction unfold?	What do they do and need at each moment?	What makes the experience possible?	What should we improve, build or protect?
DIMENSIONS	Persona Context Capabilities Constraints	Goal Motivation Success criteria	Scenario Trigger Scope Outcome	Stages Sequence Narrative Key moments	Think · Feel Know · Expect Need · Trust	People Channels Interfaces Information Services	Flows Branches Dependencies Exceptions Recovery	Actions Information Decisions Support Friction	Interfaces Services · Data Identity · Rules Protocols · Infra	Pain points Moments of truth Opportunities Requirements Principles
LENS	Persona / user profile	User needs / JTBD	Scenario / experience framing	Journey mapping / experience narrative	Empathy mapping / mental models	Journey map / service blueprint	Task analysis / interaction flows	User-needs mapping	Service blueprint / system mapping	UX synthesis / opportunity mapping
OUTPUT	PERSONA & CONTEXT	GOAL & SUCCESS CRITERIA	SCENARIO & SCOPE	JOURNEY STAGES	HUMAN-STATE MAP	TOUCHPOINT & ACTOR MAP	SEQUENTIAL / ACTION GRAPH	ACTIONS & NEEDS MATRIX	TECHNICAL & SERVICE MAP	DESIGN REQUIREMENTS
ILLUSTRATIVE FINDINGS	Evidence status is attached to individual findings — examples below.									
	● OBSERVED	● OBSERVED	○ ASSUMED	● OBSERVED	● INFERRED	● INFERRED	● OBSERVED	○ ASSUMED	○ ASSUMED	◇ DESIGNED
	Persona interview: user checks requested data.	User pauses before approving the request.	Users expect a clear start and end state.	Users abandon at the verification step.	User may not understand why all data is needed.	User may confuse service and external verifier.	User opens “Why needed?” before continuing.	Purpose explanations may reduce uncertainty.	Recovery dependency may be critical.	Show attribute → purpose → recipient before approval
