Beyond the e-ID

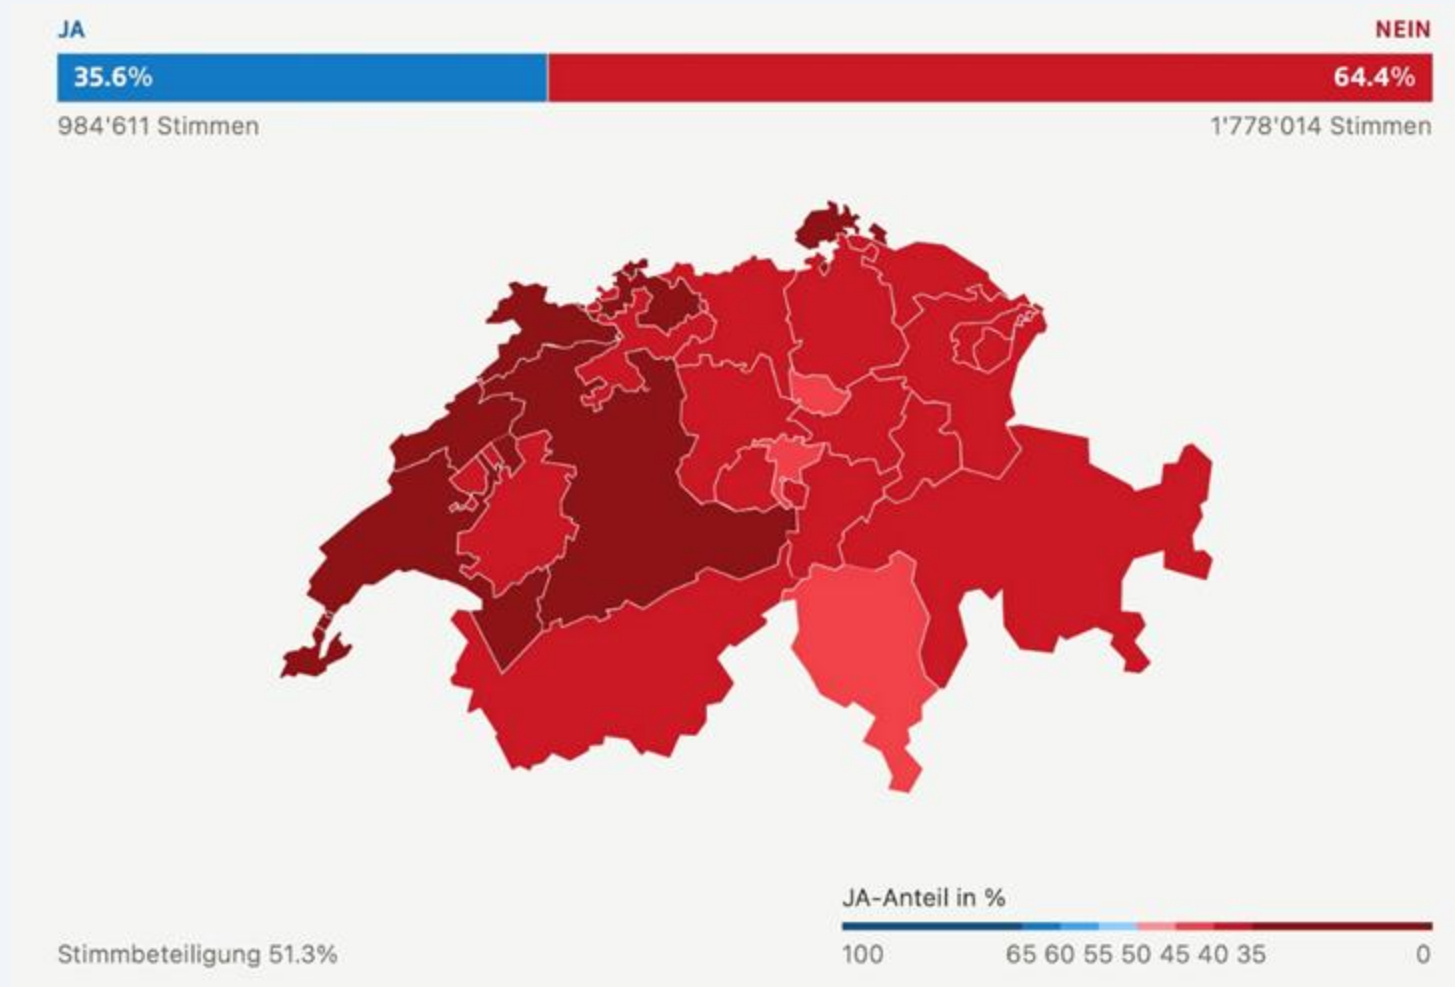

Daniel Säuberli

Swiss Democracy and the e-ID

Rejection of the e-ID_1.0 at the ballot (2021)

Six motions for a trustworthy, state-issued e-ID_2.0

e-ID_2.0 is a total turnaround

- e-ID_2.0 is an electronic identity
- e-ID_2.0 is issued by the federal government
- e-ID_2.0 is based on privacy-by-design and privacy-by-default

Federal government has still homework to do

- Ensure no over-identification takes place
- Keep the promise of open source
- Keep the promise to issue the e-ID also to third-party wallets

Overall, the opportunities of e-ID_2.0 outweigh its risks

Swiss e-ID and trust infrastructure

The e-ID is the digital form of my ID card

The e-ID is voluntary

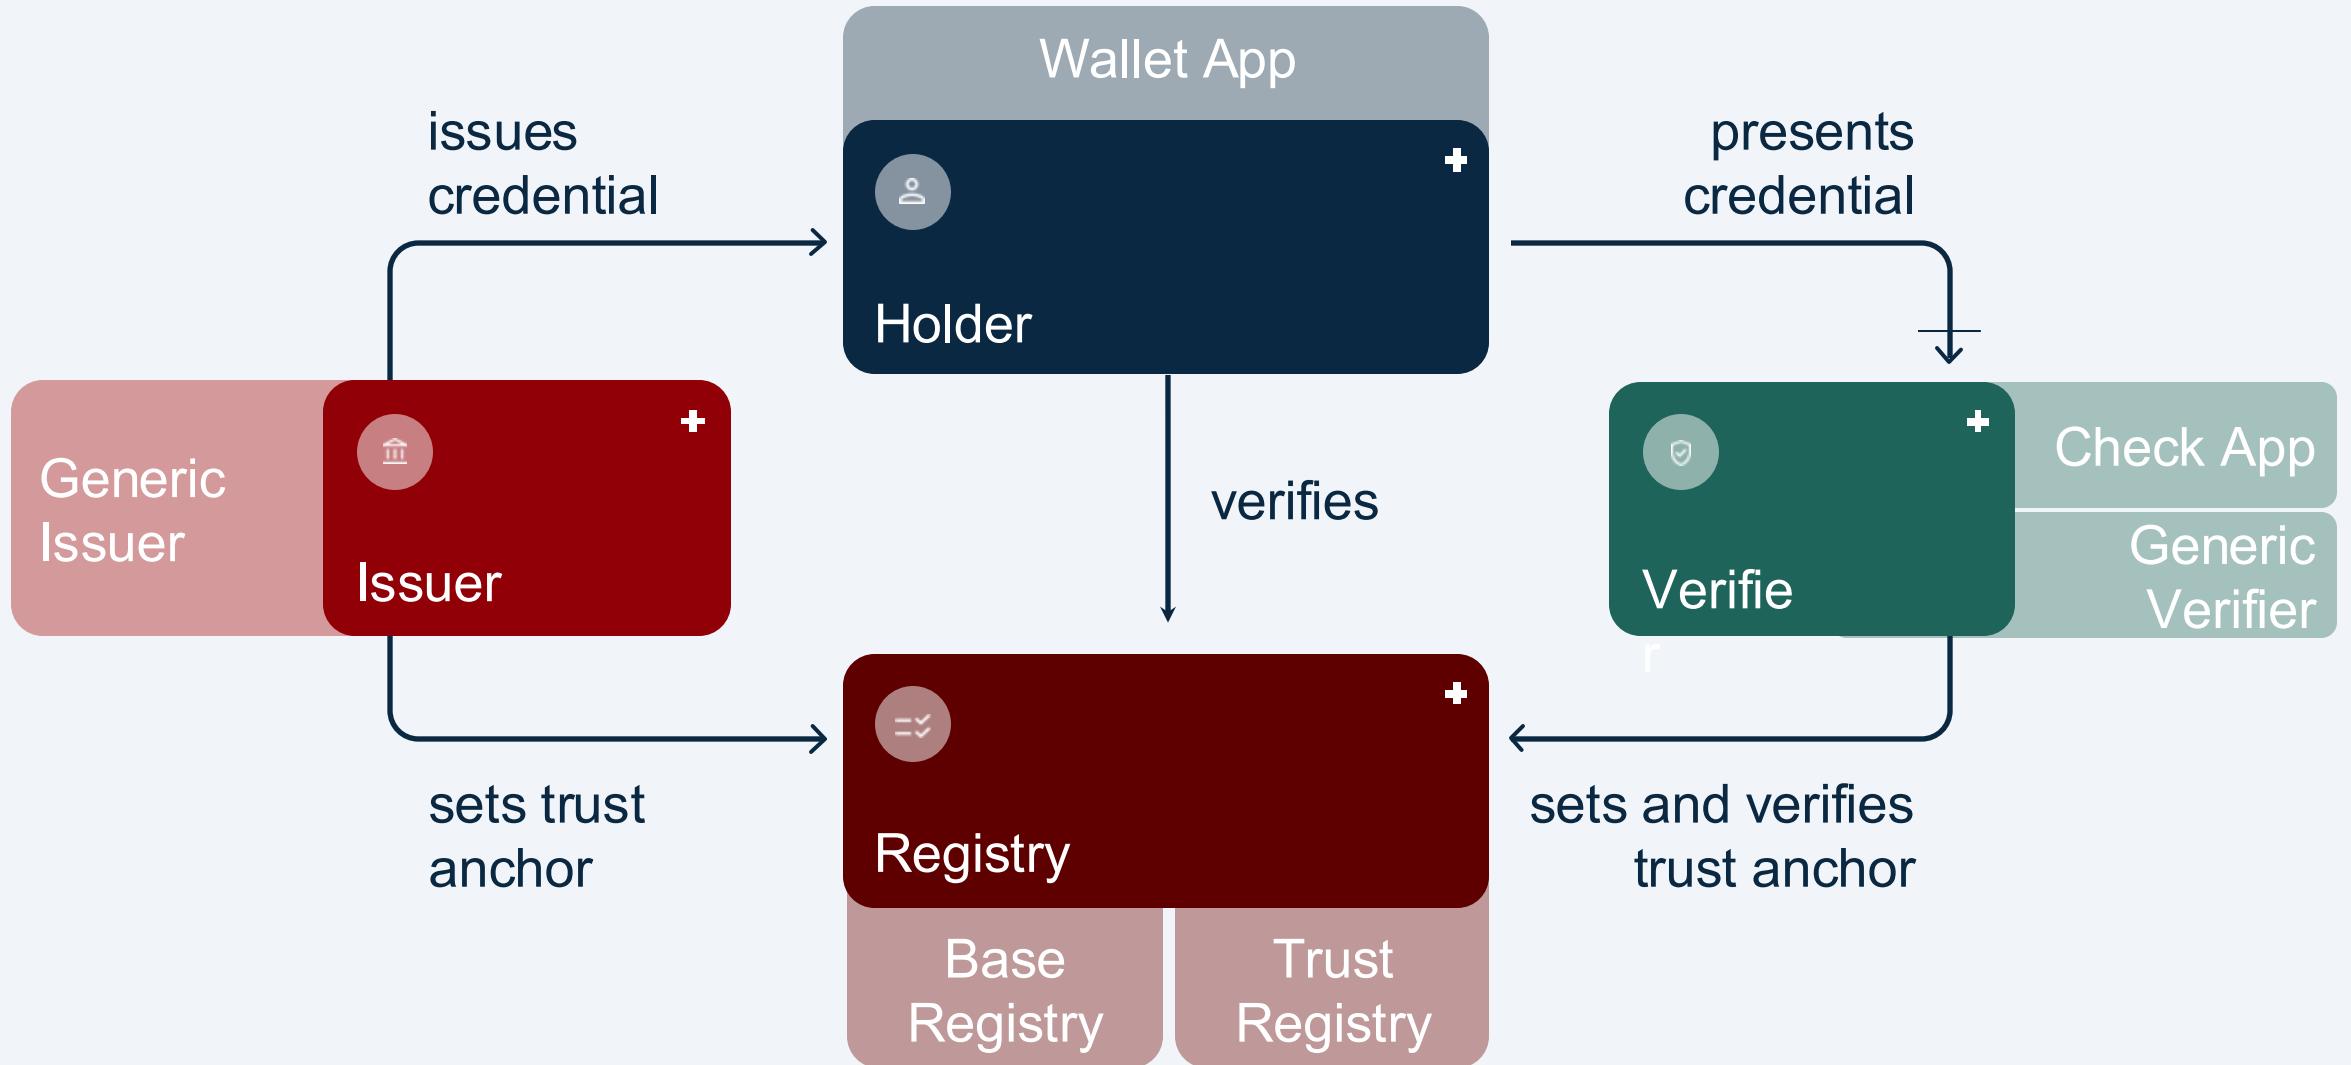

No more interruption in data flows

With the e-ID, I control
who I share my data with

swiyu, the state's trust infrastructure

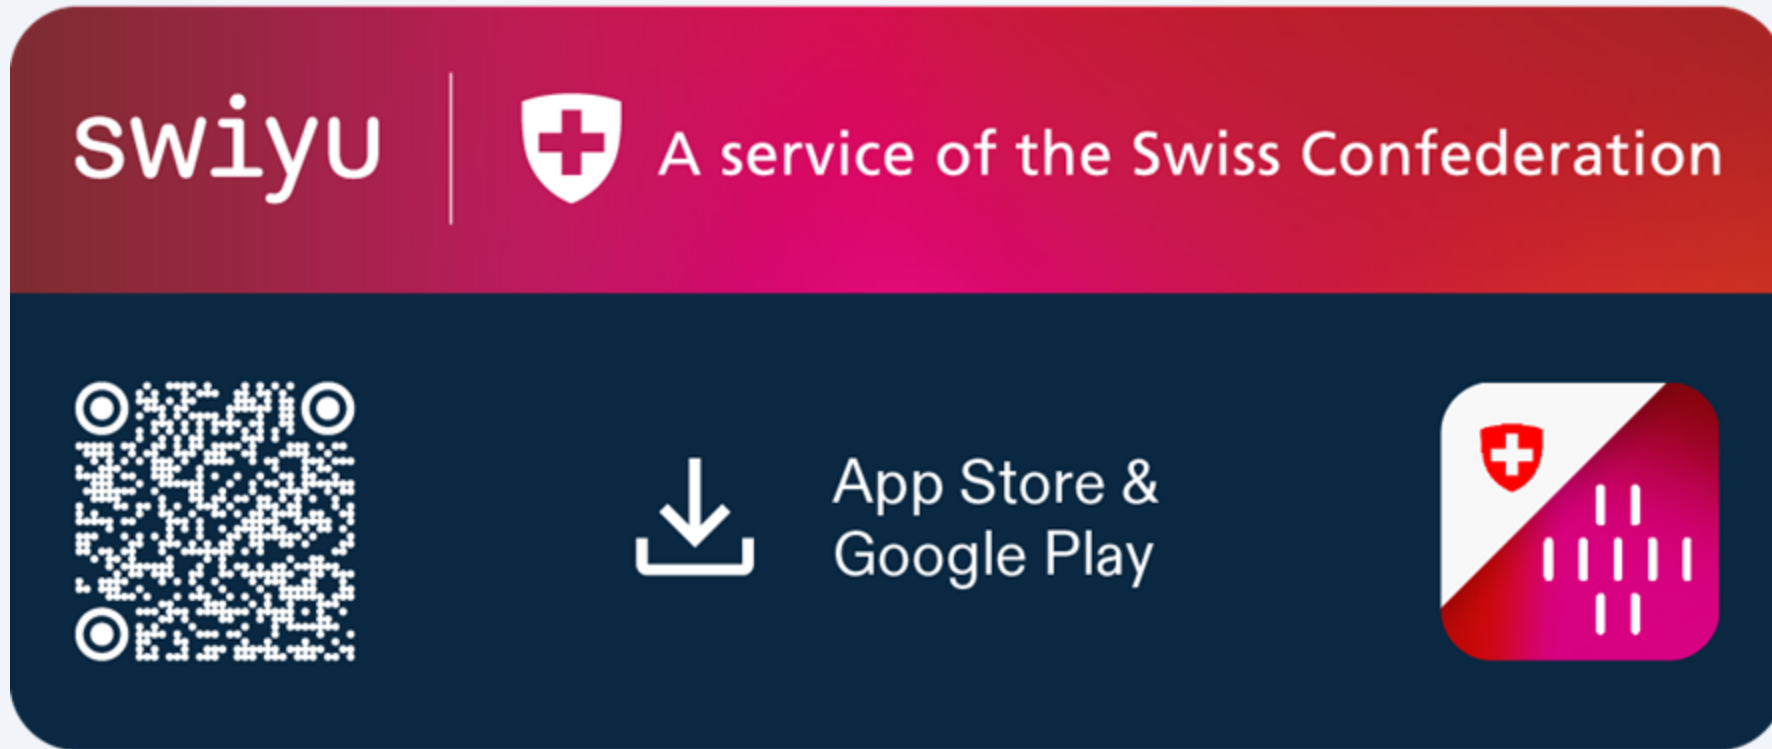

Technology stack

- Issuer and Verifier Identification Method – did:webvh
- Verifiable Credentials – SD-JWT VC
- Signature Scheme – ECDSA
- Credential Exchange Protocols – OIDC4VCI/OID4VP
- e-ID bound to hardware (Crypto Processor)
- Credential Revocation – Token Status List
- Trust Protocol – proprietary
- Appearance of Credentials – OCA
- Unlinkability – Batch-Issuance with a dedicated Renewal Key

Team of 120 people, budget CHF 180 million

Try out **swiyu** and Beta-ID yourself

Referendum vote on e-ID_2.0

September 28,
2025

Beyond the e-ID

The e-ID is just the Starting Point

- On path to **collectively build a trust fabric for the internet** to satisfy our needs for digital control & assurance in an increasingly machine-augmented world.

Empowering Connections

Seamlessly link people, organizations, and machines while strengthening sovereignty and self-determination.

Designed for Switzerland:

Flexible architecture that effectively models the Swiss decentralized federal system.

Secure, Simple, Sustainable:

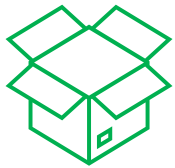

Built for strong security, user-friendly experiences, and efficient long-term management.

- Sustainably Aligned with:
 - Civic and Cultural Values
 - Sustained high expectations towards individual's Privacy and Control
 - Enhanced Economic and Legal Flexibility in national and international contexts

Various Ambition Levels have been Articulated

Ambition Level 1: state-issued e-ID

28. September 2025

Legal digital identity for individuals, anchored in public authority.

Ambition Level 2: Other Government- issued verifiable credentials

Trusted digital proofs for official documents and attributes (residency, licenses, etc.)

Ambition Level 3: Open VC Ecosystem

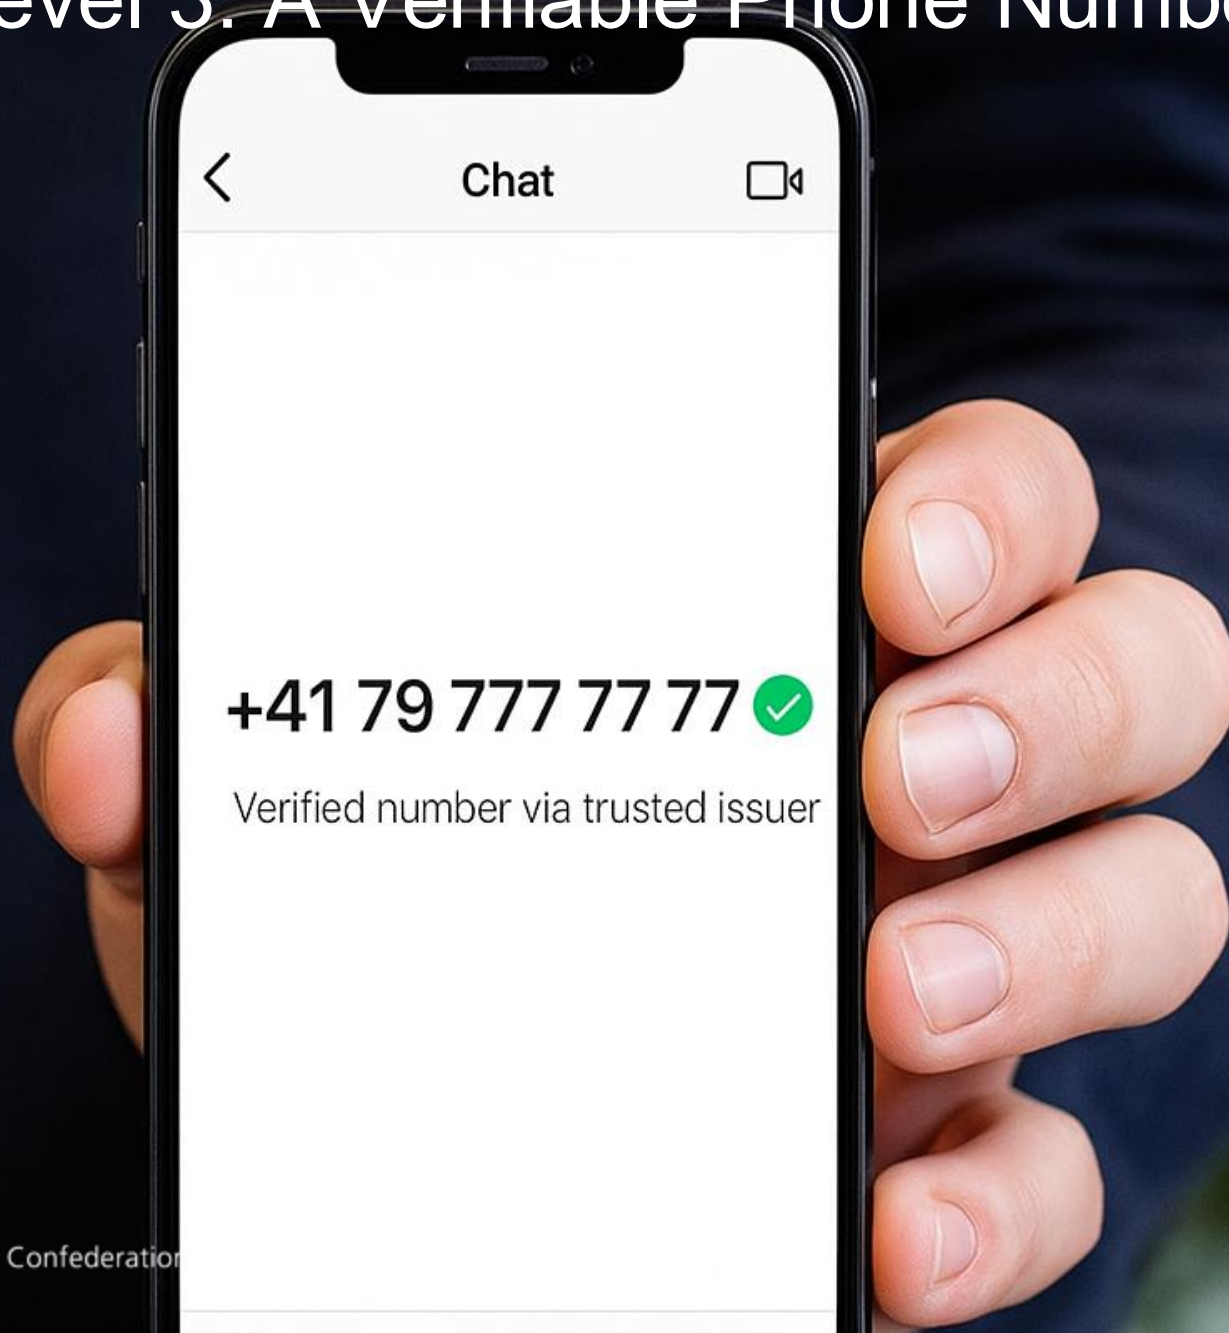

Interoperable, multi-sector network for reusable, authentic data.

Ambition Level 2: The mobile driver's licence in swiyu

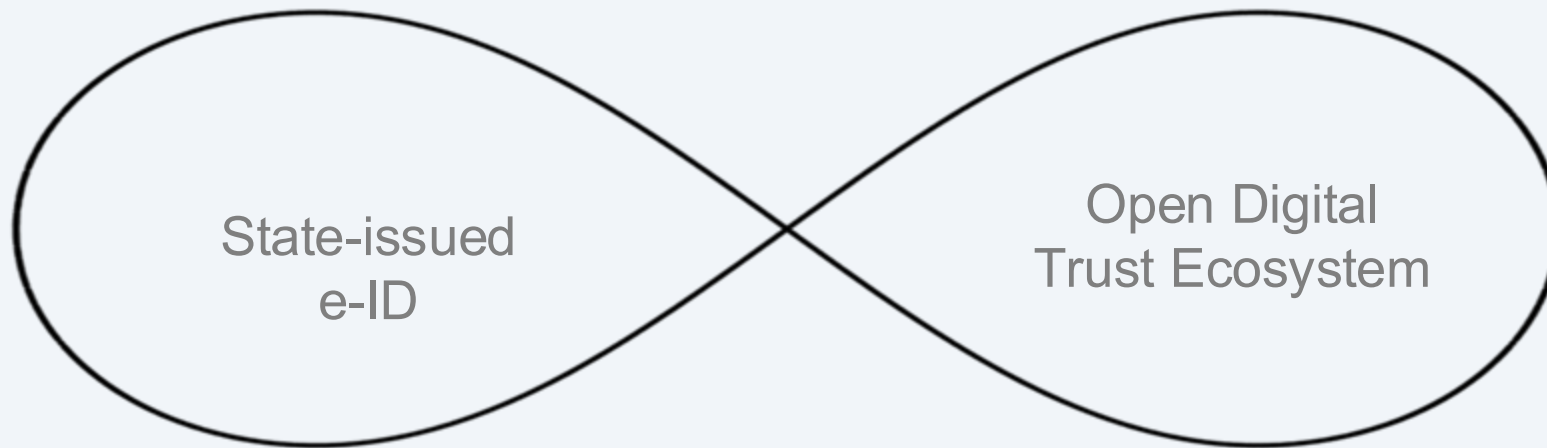

Ambition Level 3: A Verifiable Phone Number in swiyu

e-ID and Ecosystem - Both equally important

- State-issued e-ID underpinned by law and key principles that avoid nation-state or business overreach through technical and human trust.
- Trust Infrastructure enables an Open Ecosystem to increasingly Exchange Authentic Data.

Openness - Aligned with Swiss Pragmatism

- Actor Participation Nationally & Internationally
- Codebase & Artefacts for Re-Use (Roll your own)
- 3rd party wallets (holder binding ensured)
- Flex on Sectoral Governance for Innovation
- Any lawful Business Models and Innovations

→ Allowing to model most complex, multi-issuer/verifier data flows and user experiences requiring sectoral- or use-case specific governance.

Enabling Systematic Change for Ecosystem Actors

User-Centric Service- and Data Flows

More Control, less friction,
simplified user experience
and better digital inclusion
of SMEs

Tackle Fraud & Manage Compliance Effectively

Address fraud
systematically, reduce
overhead and streamline
regulatory adherence

Boost Assurance in Automation

Enable higher-quality
insights to action,
automation, and trustworthy
digital transformation

Community and Federal government has still homework to do

- Launch a political process for a flexible, interoperable and persistent Org e-ID to enable B2B with linked representatives and other org credentials.
- Ensure inclusive, formal governance for swiyu evolution to protect private sector adoption and investment.
- Intensify collaboration with key enablers to anchor trust infrastructure in real-world value.
